EDUCATION

Herald College Kathmandu (University of Wolverhampton)
Bachelor of Science (Hons) in Computer Science

Completed: 2026

PROFESSIONAL SUMMARY

Computer Science graduate with experience developing and manually testing full-stack web applications and REST APIs through academic projects. Familiar with functional and integration testing, API testing using Postman, debugging, Git, and Jira. Have tested application workflows, frontend-backend communication, authentication, and role-based access. Detail-oriented and eager to build a career in software QA and test automation.

TECHNICAL SKILLS

- **Software Testing:** Manual Testing, Functional Testing, Integration Testing, API Testing, Test Case Design & Execution, Bug Identification & Debugging, Authentication & Role-Based Access Testing
- **Tools:** Postman, Jira, Git, GitHub, VS Code
- **Programming:** JavaScript, Python, C#, SQL
- **Web & APIs:** React, Node.js, Express.js, MongoDB, REST APIs
- **AI & Machine Learning:** TensorFlow, Keras, NumPy, Pandas, CNNs, NLP, LSTM, Word2Vec, LLM Integration

SELECTED TECHNICAL PROJECTS

Gamified Learning Web Application — Final Year Project

MERN Stack | React | Node.js | Express.js | MongoDB | REST APIs | Postman

- Developed a full-stack gamified micro-learning platform with authentication, learner/admin workflows, quizzes, progress tracking, rewards, and payment-based content unlocking.
- Manually tested frontend and backend functionality, including application workflows and frontend-backend integration.
- Tested REST API endpoints using Postman, including authenticated requests, access control, payment flows, and learner operations.
- Created and executed test cases for key workflows, documenting inputs, expected/actual results, and test status.
- Tested authentication and role-based access to verify that learner and admin permissions behaved as expected; identified and debugged issues during development.

NLP Hate Speech Detection — Group Project

Python | TensorFlow | Keras | LSTM | Word2Vec

- Developed text classification models for detecting hate speech in tweets.
- Preprocessed and prepared text data using tokenization and sequence padding.
- Compared SimpleRNN and LSTM-based approaches and evaluated predictions on unseen data.

Traffic Sign Classification — Group Project

Python | TensorFlow | Keras

- Developed CNN models for traffic sign classification using TensorFlow and Keras.
- Compared different CNN architectures, optimizers, and VGG16 transfer learning.
- Evaluated model performance using accuracy, precision, recall, and F1-score.
